- DATA ANALYTICS | EDUCATION | AUTOMATION | PROCESS IMPROVEMENT -

Data analyst and finance professional with experience transforming complex educational and financial data into automated reporting, operational insights, and executive decision support. Skilled in SQL, Python, Tableau, reporting automation, and data visualization, with a proven record of improving data quality, streamlining workflows, and partnering with stakeholders across K–12 education.

- TECHNICAL SKILLS -

SQL, Python, Pandas, Tableau, Excel (Advanced), Power BI | Data Analysis, Dashboard Development, Data Visualization, Reporting Automation, Forecasting, Statistical Analysis

- PROFESSIONAL EXPERIENCE -

EUGENE SCHOOL DISTRICT 4J | Eugene, OR

Senior Financial Analyst | Sept 2024 – Present

- Developed a district-wide equity analysis evaluating capital project spending across 36 schools using financial, demographic, and student-need data via a custom analytical framework in Python and Excel. Presented findings to leadership showcasing both equitable and inequitable spending.
- Designed and developed a Python-based reporting platform that automated data extraction, transformation, validation, and reporting for over 40 schools, reducing manual reporting effort by more than 40 hours per reporting cycle.
- Developed district-wide KPI scorecards and financial health scorecards summarizing spending patterns, budget utilization, and operational metrics, enabling leadership to quickly identify emerging risks and trends.
- Partnered with district administrators and executive leadership to support budgeting, forecasting, financial planning, and resource allocation through data-driven analysis and executive reporting.

HEAD START OF LANE COUNTY | Springfield, OR

Strategy and Finance Analyst | Jan 2024 – Sept 2024

- Identified and resolved significant historical payroll and financial reporting discrepancies through investigative data analysis across a \$10 million nonprofit organization.
- Created executive-level reporting packages and analytical summaries supporting organizational leadership and strategic decision making.
- Developed Python-based automation tools that streamlined recurring financial reporting and journal entry preparation.

FIRST FOUNDRY | Eugene, OR
Data and Strategy Analyst | Mar 2022 – May 2023

- Produced financial analysis, KPI reporting, and market research supporting executive leadership, investors, and business development initiatives within a high-growth technology startup.
- Partnered with leadership on strategic planning, investment evaluation, and commercial growth initiatives through financial modeling and competitive analysis.
- Developed KPI frameworks and performance metrics used to evaluate project performance, guide strategic planning, and support investment decisions.

- SELECTED DATA ANALYTICS PROJECTS -

Fund 400 Equity Analysis

- Developed a custom analytical methodology to evaluate equity of capital spending across schools using enrollment, demographic, and student-need indicators.
- Created weighted scoring models to assess spending distribution across district schools.
- Presented findings to district leadership, identifying both equitable and inequitable spending patterns across schools.

School Reporting Automation Platform

- Built a Python-based reporting pipeline that generates individualized school financial reports, dashboard summaries, spending analyses, and cash flow reports from district datasets.
- Automated data preparation, validation, workbook generation, chart creation, and report formatting, significantly reducing manual reporting effort while improving reporting consistency.

School Financial Report Card

- Developed a district-wide financial health scorecard providing finance leadership with a single-page view of spending patterns across schools.
- Created quarterly spending metrics, budget utilization indicators, and color-coded exception reporting to quickly identify schools requiring additional review or support.
- Designed the report to transform large volumes of financial data into an easily interpretable management tool for district decision makers.

District Dashboard Application

- Developed a web-based dashboard application featuring KPI scorecards, transaction drill-downs, export functionality, and interactive visualizations for administrator self-service reporting.
